

Contest Rules for IOAI 2026

Version 4 (May, 2026)

This document outlines the official rules for three contests of the **International Olympiad in Artificial Intelligence (IOAI) 2026**:

- Individual Contest
- Team Challenge
- GAITE Contest

The rules may be updated to address omissions, inconsistencies, or new information prior to the event, but they will not change substantially in format.

Team Leaders are responsible for ensuring that all team members fully understand and comply with these rules.

1. General Requirements

1.1. Code of Conduct

- **OATH.** We, the participants of this International AI Olympiad, solemnly swear to compete responsibly and honestly, embracing the spirit of fair play and collaborating ethically with AI. For the glory of humankind and the honor of our teams, we swear!
- **Respect.** All individuals involved are expected to show respect and consideration; to create a welcoming environment that celebrates diversity and fosters mutual understanding.
- **Integrity.** Participants must engage in fair play, avoid deception, and maintain the spirit of honest contest.
- **Confidentiality.** Sensitive information, especially regarding problem statements and solutions, must be safeguarded to ensure the integrity of the contest.
- **Professionalism.** Interactions should be characterized by formality and decorum, reflecting the serious nature of the academic pursuit and respect for fellow competitors and officials.
- **Safety and Welfare.** The IOAI is committed to providing a secure environment. Any behavior that endangers the emotional or physical well-being of participants is strictly prohibited.
- **Compliance with Rules.** Understanding and adhering to the official rules are obligatory. This includes guidelines for the contest structure, submission deadlines, and conduct during events.
- **Reporting Misconduct.** Transparency is crucial. Any unethical behavior or rule violations observed should be promptly reported to ensure fairness and accountability.
- **Enforcement.** The IOAI will enforce this code rigorously. Infractions can lead to sanctions, including but not limited to disqualification and barring from future participation.

1.2. Eligibility Criteria

- Contestants must be 20 years old or younger on 1 July of the year of the IOAI edition in which they are participating. That means contestants must be 20 years old or younger on 1 July of the year of the IOAI edition in which they are participating. That means every contestant at IOAI'n (held in year n) must have been born on or after 1st July, in the year $n - 20$.
- Contestants must have been normally enrolled in full-time primary or secondary education on or after 1 December in the year prior to the IOAI, or, in the case of home-schooled students, must not have received a high-school diploma (or equivalent), and must be working toward such a credential on 1 December of the year prior to IOAI.
- Contestants of Country/Territory X should normally be citizens of Country/Territory X, but genuine long-term foreign residents who are not citizens (and who are being educated in Country/Territory X) are permitted to be in the IOAI team of Country/Territory X provided that the student has already spent at least one full academic year being educated in Country/Territory X and will spend a total of at least two years in full-time education in Country/Territory X before they leave secondary education. Such a residency must be for a bona fide family reason, and not artificially to change national status for participation in IOAI.
- Note that IOAI tourism is not permitted: a student may not attempt the final selection examinations of more than one country in a given IOAI year.
- The Board may approve deviations from this regulation in exceptional circumstances when sufficient evidence has been provided.

2. Individual Contest

During the Individual Contest, the contestants from each country use computers provided by the organizers, must not communicate during the contest, and their results will be computed individually. **It is important to know that medal allocations are only based on results of the Individual Contest.** The tasks of the Individual Contest are designed in accordance with the [IOAI Syllabus](#).

2.1. Contest Schedule

- **At-home contest:** There are 3 problems provided to each team about one month before IOAI 2026. These problems are for educational purposes, and the results of the at-home contest **do not** affect the final results of IOAI 2026.
- **Practice session:** A practice session will be held before Individual Contest 1 to help contestants familiarize themselves with the contest hall and the contest system. This has no impact on the scores and medals.
- **Individual Contest 1:** There are 3 tasks in this contest and each one of them is connected, in subject matter or method, to at least one of the at-home contest tasks. Contestants will have six hours to solve these problems.
- **Individual Contest 2:** There are three tasks in this contest, designed to evaluate contestants' problem-solving skills and creativity through new and previously unseen problems. These tasks are not necessarily connected to the At-Home tasks. Contestants

have six hours to solve these problems.

2.2. Contest Environment

- The programming language used will be Python, and development will primarily take place in a Jupyter Notebook environment.
- The core AI/ML libraries will be torch and scikit-learn. TensorFlow and Keras are NOT available during the contest. The detailed list of available packages and technical details will be published in the Technical Appendix.
- All contestants will have access to identical local machines during the contest, though minor technical differences may exist.
- Contest tasks may include, but are not limited to: writing code, fitting models on training data, running inference with trained models on test data.
- All contestants will have access to identical GPU resources during the contest. Details of the GPUs will be provided in the Technical Appendix.
- On a per-task basis, contestants may be asked to submit their code, trained models, and/or model predictions. There will be no additional time for model training after the end of the contest.
- During the contest, the machines of the contestants and the grading system have limited access to the Internet. This means that the contestants cannot download any pretrained models from the Internet, or use any external AI API. However, there are some pretrained models in some packages that will be already downloaded on their machines and thus can be used for training their models. The list of pretrained models available will be published in the Technical Appendix.
- The final list of available websites, editors, tools, search engine and translation system will be published in the Technical Appendix.
- During the contest, screen activity on all contestant computers might be monitored in real time and might be recorded for future reference.
- You may contact the ISC (isc@ioai-official.org) up to two weeks before the IOAI starts for:
 - Additional editors to be installed on the contestants' machines.
 - Additional websites to be added to the white list.

2.3. Translation

- As part of the final registration, in a google form expected to be submitted in June, all teams will be asked (1) the languages they require translation, (2) if they need additional people, part of the national delegation, to help the team leader for the translation, (3) if they need additional computers, and (4) preferred LLM for the translation. The ISC will review and approve, partly approve, or reject all requests.
- To provide translated tasks to the contestants, a translation session will start three hours before each Individual/GAITE Contest.
- During the translation session, each team will receive a computer/s provided by the host, the tasks in English and access to a pre-translated version of tasks to languages that the teams asked for. There is no access to the Internet.
- For each country, one computer is provided during the translation session and one person can use it unless the ISC and HSC have approved a request for additional

computers or people as part of the final stage of the registration process.

- In exceptional situations where the host-provided computers do not support a specific language, TLs can ask the Jury to install their preferred input language on the computer.
- If several teams have contestants who speak the same language, the TLs of those countries may collaborate during the translation session. In such a situation, the TLs must discuss without distracting other TLs.
- All translations should match the original English version. Providing extra information or hints in translations is prohibited.
- During each contest, all contestants will have access to the original English version and all translations of each task.
- All translations will be shared with the TLs as soon as the contest starts, and made public after the contest on IOAI official website. If any violation of the above rules (e.g. providing hints or extra information) is reported after the contest, the team who violated the rules will face penalties that include reduced scores up to complete disqualification.

2.4. Quarantine Rules

- From the start of the translation session until the end of each contest, all task-related material shared with the TLs is considered highly confidential.
- There is no quarantine for the contestants before the contest. This means that they can use their electronic devices before the contest.
- TLs and observers who enter the translation session must sign a Non-Disclosure Agreement, promising not to communicate details of the tasks with anybody outside the translation session until the end of the contest.
- From the start of the translation session until the beginning of the contest, all TLs and observers who are present in the translation session are under quarantine. During this period, the people present in the translation session cannot use cell phones, computers, or other communication devices.
- After the quarantine is finished, TLs and observers can use their cell phones and computers, but they are NOT allowed to share anything related to the tasks with other people or post them online until the contest is finished. During this period, any communication between TLs and other people outside the quarantine (e.g., contestants or anybody else) regarding the contest tasks may result in penalties including disqualification of the teams involved.

2.5. Scoring

- Each task may consist of multiple subtasks, with each subtask contributing a portion of the total score.
- Final Score: The final score of each task is a number between 0 and 100, and is computed according to the details below.
- Baseline Solution: A baseline solution, typically provided in the task statement, represents a simple or trivial solution that helps establish the minimum acceptable performance for the task.
- Normalized Score Calculation: For each task, the score of a submission is normalized using the following formula:

$$\text{Norm_Score} = (\text{Submission_Score} - \text{Min_Score}) / (\text{Max_Score} - \text{Min_Score}) * 100$$

- **Submission_Score** = The raw score obtained for the submission (e.g., accuracy, AUC, F1-score, or any other metric specified in the task statement). The scoring section of the task statement describes only the submission score.
- **Min_Score** = The score of the baseline solution.
- **Max_Score** = The maximum score, determined by the greater of the following two values:
 - $0.9 \times \text{SC_Solution}$: The score of an (almost) optimal solution written by the Scientific Committee, or
 - **Max_Submission**: The highest unnormalized score achieved by any contestant's submission during the contest.
- **Final Score Calculation**: The final score for a task is the sum of the scores of its subtasks.
- **Example**: Assume a task is evaluated based on accuracy, and the raw accuracy score of a contestant's submission is 85%. The baseline solution has an accuracy score of 60%, and the optimal solution from the Scientific Committee has an accuracy score of 95%.
 - **Submission_Score** = 85%
 - **Min_Score** = 60%
 - **SC_Solution** = 95%
 - **Max_Submission** = 90% (let's assume another contestant achieved 90%)
 - **Max_Score** = $\max(0.9 \times 95\%, 90\%) = 90\%$
 - **Norm_Score** = $(85\% - 60\%) / (90\% - 60\%) \times 100 = (25\%) / (30\%) \times 100 = 83.33$
 - Thus, the normalized score for this submission would be 83.33.
- All score computations (raw metrics, normalization, summation) performed at IEEE 754 double precision throughout the pipeline, with no intermediate rounding. Displayed scores (reports to TLs, scoreboards, certificates) shown to 4 decimal places. Medal boundaries calculations use full-precision unrounded values, not the 4-decimal display values.

2.6. Feedback (Scoreboard)

- For each task of the Individual/GAITE contests, there are 3 types of datasets (unless otherwise specified in the task statement):
 - **Training Dataset**: For this dataset, the contestant has access to both data and labels during the contest. It is used to train the model.
 - **Validation Dataset**: The contestant has access to the data, but not labels, during the contest. When the contestant submits a solution during the contest, the solution is scored based on the validation dataset and the feedback (submission score and the anonymous highest score achieved by any other contestant) is provided as the feedback to the contestant. The contestant can use that information for adjusting the hyperparameters and selecting the best model. The results of evaluation, based on the "Validation Dataset" are called the **"Scoreboard A"**.
 - **Test Dataset**: The contestant has access to the data, but not labels, during the contest. This dataset is not used during the contest. When the contest is finished, the final solution of the contestant is evaluated based on the test dataset, and the

results are called the “**Scoreboard B**”. These results are used as the official scores of the contest: Official rankings, medals and awards are only based on the Scoreboard B scores.

- As stated above, during the contest, each contestant will have access only to their own scores in Scoreboard A (based on validation dataset) on each task. They cannot see the scores or rankings of the other contestants. But they can see the Min_Score (score of the baseline solution) and the Max_Submission (the highest unnormalized score achieved by any other contestant at each time of the contest).
- Scoreboard A is public to the TLs after the competition is finished but they are asked to keep it confidential from everyone else, including their teams.
- After the contest, each TL confidentially receives on paper the Scoreboard B scores (and not ranking) of their contestants (based on the test dataset), both as raw and normalized scores. They are expected to share the scores of their team with their contestants to prepare for the appeals, while keeping them confidential from the other teams until the closing ceremony.
- Nobody is provided the official ranking until the closing ceremony. After the closing ceremony, all results of both scoreboard A and B are published transparently to everybody.

2.7. Supplies

- **Provided Supplies:** Blank paper, writing tools, Clarification Request Forms, snacks, and water will be provided in the contest hall.
- **Approved Items:** Writing utensils, small mascots, non-electronic earplugs, ID badges, snacks, and water are allowed. Contestants may ask the Scientific Committee to bring their own keyboard or mouse to the contest hall. This request should be made during the practice session and may or may not be satisfied. Bringing an external monitor is not allowed.
- **Prohibited Items:** Contestants may **not** bring items such as electronic devices (computers, phones, earphones, calculators, any sort of communication or Bluetooth-enabled items), books, manuals, data storage media, or any items that could store or transmit data.
- Medical items (e.g. tablets, glucometers) are allowed but must be approved by the Jury before being brought into the contest hall. These and other special need requests can be made during the practice session. If any medical device requires a Bluetooth connection to software on a cell phone, the cell phone should be kept by a volunteer in the contest hall who is previously educated on what to do in case of any abnormal situation. If there are any other situations, the Scientific Committee should be informed before the practice session.

2.8. Starting the Contest

- Contestants must be seated at least 10 minutes before the start of the contest.
- Contestants should not touch the workstation or any tools until instructed by the organizers.

2.9. Clarification Requests

- Clarifications regarding task details, rules, or grading may be submitted to the Scientific Committee via the contest system or written forms.
- The Scientific Committee will respond to clarification requests with one of the following answers:
 - Yes / No
 - Please refer to Section [section_number] of the Task Statement/Contest Rules/Appendix X
 - Please refer to the dataset and the baseline first when the task description is unclear
 - The Python environment cannot be changed during the Contest
 - Please ask your question in Yes/No format
- The Scientific Committee may deny responding to a question that is ambiguous, unclear or pertaining to knowledge the contestant should have.
- Any non-trivial and substantial answers will be broadcasted to all contestants.

2.10. Technical Assistance Requests

- If a contestant faces any technical issues (e.g., computer, network problems), they should raise a colored card (as instructed by the organizers at the IOAI) to request assistance.
- Assistance staff will address such issues but will not answer questions regarding contest tasks.

2.11. Ending the Contest

- Contestants will receive three warnings at 15, 5, and 1 minute before the end of the contest.
- At the end of the contest, all contestants must immediately stop working and await instructions to leave their desks.
- In case of a substantial technical problem, contestants may be given extra time, on a case-by-case basis.
- If a contestant encounters an issue that may require extra time (such as a network disconnection or a frozen computer), they must immediately notify the Jury by submitting a clarification request (as instructed by the organizers at the IOAI) to ask for extra time. The contestant will be informed before the end of the contest whether extra time has been granted. If approved, the contestant must resume working immediately after the contest ends, as the extra time will begin at that point.

2.12. Cheating and Violations

- Contestants are prohibited from engaging in any form of cheating, including but not limited to: tampering with the contest system, trying to breach scoring system, communicating with team leaders or deputy leaders during the quarantine period, direct or indirect communication with other contestants or people outside the contest hall during the contest, bringing prohibited items into the contest hall, or attempting unauthorized access

to test data.

- The screen of each contestant's computer may be recorded or remotely proctored.
- Assistance staff will log any suspected cheating or rule violations observed during the contest, including discussions they had with or warnings given to contestants. This information will be reviewed by the Jury.
- Violating any of these rules may result in disqualification or other penalties.

2.13. Appeal Process

If a contestant or team believes that their results in the Individual Contest, GAITE Contest, or Team Challenge should be revised, they should submit an appeal. All appeals **MUST** be submitted by the Team Leaders.

Individual/GAITE Contests:

- Team leaders may submit appeals on behalf of any contestant from their team via google form link provided by the organizers.
- **Team Challenge:**
- Team leaders may submit appeals on behalf of the entire team.

Appeal submission deadlines

- Individual & GAITE Contests: Appeals about each contest can be submitted starting immediately after the contest ends. The final time to submit any appeals (for Day 1 and Day 2) will be announced by the organizers in the olympiad schedule.
- Team Challenge (per round): Appeals can be submitted starting at the beginning of the challenge round, and must be submitted within 1 hour after the round ends.

Review and decision process

- All appeals will be reviewed by the International Jury.
- If the Jury has any questions or needs extra information about the appeal, it contacts the Team Leader via the same email address. The Team Leader must respond to the Jury as quickly as possible. If there was extra information required, Jury might decide to have a face-to-face meeting with the Team Leader and possibly the affected contestant. The information and timing of the appeal-review meeting will be announced by the organizers.
- Final decisions on appeals will be shared with the General Assembly (GA) during the first GA meeting held after the decisions have been made.

3. Team Challenge

- Team Challenge is an official part of IOAI in which the national teams participate in a creative and AI-oriented challenge.
- The style of the Team Challenge changes every year. During the IOAI 2024 Team Challenge (formerly known as "Practical Round"), teams were asked to use existing AI tools and platforms for an exciting task: In 2024 it was designing the album cover and music video for the next hit song of a Bulgarian pop star. In 2025 it was programming humanoid robots. The style of the Team Challenge for IOAI 2026 will be announced later.
- During the Team Challenge, all contestants of each team are seated together and can communicate and cooperate.
- The number of computers that a team can use during the Team Challenge and the websites and tools allowed to be used are task-specific and will be announced before the

Team Challenge.

- The tasks of the Team Challenge are provided in English, and there is no translation session for the Team Challenge. The contestants can use a translation website informed by the organizers.
- During the Team Challenge, the contestants of each team cannot communicate with people outside the contest hall.
- Approved and Prohibited items in the Team Challenge are similar to those of the Individual Contest and GAITE.
- The scoring for the Team Challenge is task-specific and will be announced in the task statements.
- The teams who achieve the topmost results of the Team Challenge will receive Team Challenge awards during the closing ceremony of IOAI.
- The duration of the Team Challenge depends on the style of running it and might take a few hours to a full day.

4. GAITE Contest

- Global AI Talent Empowerment (GAITE) Contest is a special version of the Individual Contest. To participate, teams must pre-register in GAITE (<https://ioai-official.org/gaite>).
- The GAITE Contest is the same as the Individual Contest (described in section 2 above) and consists of two days with the same time and the same length as the Individual Contests 1 and 2.
- The tasks of GAITE Contest Day 1 and Day 2 are the same as the tasks of Individual Contest Day 1 and Day 2. The difference is that GAITE contestants are provided with hints and possibly more LLM support.
- There is a separate scoreboard for the GAITE Contest. It means the top score used for computing the normalized scores of the GAITE contest is the one achieved in the GAITE contest.
- The contestants who achieve the top results of the GAITE Contest will receive awards (but not medals) during the closing ceremony.

5. Medals, Awards, Trophies and Certificates

5.1 Individual Contest

- Medals are awarded solely based on total scores from the Individual Contest. The number of contestants refers to those who participate in at least one day of the Individual Contest. All scores reflect the total from the Individual Contest.
- The minimum score required for a Gold Medal is the highest score that ensures at least one-twelfth of all contestants receive a gold medal.
- The minimum score required for a Silver Medal is the highest score that ensures at least one-quarter of all contestants receive either a gold or silver medal.
- The minimum score required for a Bronze Medal is the highest score that ensures at least

one-half of all contestants receive either a gold, silver, or bronze medal.

- A contestant who does not earn a medal will be granted an Honourable Mention if, on at least one of the two days of the Individual Contest, fewer than half of the contestants achieve a higher score than they do.
- The top three contestants with the highest total scores in the Individual Contest will be awarded the First Place, Second Place, and Third Place Trophies.

5.2 Team Challenge Trophies

- All teams participating either in the Individual Contest or the GAITE Contest participate in the Team Challenge.
- The three teams with the highest scores in the Team Challenge will receive the Team Challenge First Place, Second Place, and Third Place Trophies.

5.3 GAITE Contest Awards

- Awards in the GAITE Contest follow the same cutoff logic as the Individual Contest medals. However, they are based on the number of contestants who participate in at least one day of the GAITE Contest.
- Instead of medals, the top GAITE contestants receive GAITE Level One/Two/Three Awards following the same principle as the medals distribution for the IOAI individual contest.
- A contestant who does not receive an award will be granted a GAITE Honourable Mention if, on at least one of the two days of the GAITE Contest, fewer than half of the contestants score higher than they do.

5.4 Certificates

5.4.1 Participation Certificate

- These certificates are awarded to all individuals officially involved in IOAI, including (but not limited to) contestants, team leaders, guests, volunteers, Jury, board and ISC members, members of the host scientific, technical, and organizing committees, and sponsors.
- Each certificate will include the participant's name, role (e.g., Team Leader), and country. It will be signed by the Chair of the Board and the Chair of the Host Organizing Committee. Additional signatures may be included at the discretion of the host country and with the approval of the Board.

5.4.2 Achievement Certificate

- These certificates are awarded to all contestants or teams who win any official medals, awards, or trophies.
- Each certificate must include the name of the contestant or team, their country, and the precise type of achievement (e.g. Medals, Awards, Trophies, Honourable Mentions).
- Achievement Certificates will be signed by the Chair of the Board, the Chair of the International Jury, and the Chair of the Host Scientific Committee.

5.5 Hall of Fame

- All results, including the scoreboard, medals, and awards, will be published on the official IOAI website.

If you have any suggestions or questions about the contest rules, please contact the IOAI International Scientific Committee (ISC) by sending an email to isc@ioai-official.org.

IOAI 2026 — Translation Session Non-Disclosure Agreement

I, _____ (full name), serving as _____ (role: Team Leader / Deputy Leader / Observer / Translator) for the delegation of _____ (country/territory), acknowledge that by entering the translation session of IOAI 2026 I will receive confidential materials, including contest tasks, datasets, baseline solutions, and related information ("Confidential Information").

I agree to the following:

1. I will not disclose, reproduce, photograph, transmit, or discuss any Confidential Information with any person outside the translation session until the corresponding contest has officially ended.
2. During the quarantine period, I will not use cell phones, computers, or any other communication devices except those provided for translation purposes.
3. After the quarantine ends and until the contest is finished, I will not share any Confidential Information with contestants or any other person, nor post it online in any form.
4. I will not introduce extra information, hints, or interpretive content into translations beyond what is present in the original English version.
5. I understand that any violation of this agreement may result in penalties for me and my delegation, including reduced scores or disqualification, as determined by the International Jury.

Signature: _____ Date: _____

Technical Appendix

Version 4 (June, 2026)

The following technical rules and regulations apply to “Individual Contest” and “GAITE Contest”. The technical details for the Team Challenge will be provided separately.

The contest platform for At-Home Round is Kaggle.

1. Platform and Development Environment

- The AI contests platform based on Yandex contest system will be used for accessing task statements and datasets, submitting solutions, and accessing evaluation scores.
- A web-based Jupyter notebook environment (JupyterLab) will be provided to all contestants. This system will have access to the GPUs for training of the models. This will be the main development platform during the contest.
- VSCode will also be available on contestants’ machines as an offline editor. It does NOT have direct access to GPUs.
- The contest environment will use a pinned version of Python 3.13. Exact package versions will be published before the contest and fixed for all contestants.

2. Available Python Libraries

The contest image will contain pinned versions of the required libraries. Exact versions will be published before the contest.

Core AI/ML: torch, torchvision, torchaudio, transformers, accelerate, peft, trl, scikit-learn, xgboost, lightgbm, catboost, sentence-transformers, datasets, evaluate, spacy, nltk, gensim, fasttext.

Data processing: numpy, pandas, scipy, polars, pyarrow, h5py.

Computer vision: opencv-python, Pillow, scikit-image, albumentations.

Visualization: matplotlib, seaborn, plotly.

Utilities/training: tqdm, joblib, tensorboard, pytorch-lightning, pydantic, pyyaml.

Standard Python libraries included with the official Python distribution may also be used.

TensorFlow and Keras will not be available. Installing additional packages during the contest will not be permitted.

3. Language Models and AI Assistance

Contestants will have access to an officially provided LLM integrated into the contest platform.

- Individual Contest: Gemma 3, at most 1000 output tokens per query.
- GAITE Contest: Gemma 4, at most 2000 output tokens per query.

The exact model, context window, rate limits, and usage quotas will be announced before the contest.

The use of any external LLMs, copilots, browser assistants, AI coding agents, or external APIs (including LLM APIs) is prohibited unless explicitly allowed in a task statement.

4. Hardware Resources and Pretrained Models

4.1. Laptops

Contestants will work on laptops. The operating system on these laptops will be Ubuntu. The laptops do not have GPUs, so the contestants need to use the Jupyterlab environment to access the Training and Evaluation Machines for training their codes.

4.2. Training and Evaluation Machines

GPU-enabled execution environments will be provided for training and evaluation of the program.

The following details will be finalized and announced before the contest:

- GPU model(s) : NVIDIA H200 141GB GPUs, splitted in to 7 Multi-Instance GPU (MIG) slices
- VRAM limit: 18GB

Approved pretrained models will be pre-cached within the contest environment. Contestants may only use models explicitly provided by the organizers. External model downloads will not be permitted during the contest.

Documentation for approved models will be accessible through Hugging Face documentation pages.

5. Allowed Websites and External Resources

Internet access will be restricted to an approved whitelist of websites. Contestants must not log in, communicate externally, or post content on these websites.

The whitelist is expected to include:

- python.org
- pypi.org
- numpy.org
- pandas.pydata.org
- scikit-learn.org
- pytorch.org
- matplotlib.org

- scipy.org
- huggingface.co/docs

Documentation websites for officially provided tools and libraries may also be included.

A translation service may be provided for language assistance.

No unrestricted web browsing will be permitted.

6. Evaluation Limits

- For each task, the notebook runtime would be limited to a maximum 20 minutes, unless explicitly stated in the task statement.
- The maximum number of submissions per task would be 60.
- The contestants can make concurrent submissions, in that case, their submissions will be added to a queue and the evaluation results will be shown to them as soon as ready.

7. Additional Rules

- Network access outside the approved whitelist is prohibited.
- Contestants must **not** use messaging, collaboration, or file-sharing services.
- Contestants must **not** attempt to bypass platform restrictions.
- Exact package versions, hardware specifications, approved pretrained models, and final platform rules will be published before the contest.
